

Open Truck Access Gate

Category: Security Related

Brief summary:

Director of Operations was first to arrive in the morning and found the truck access gate was wide open. It was very windy the night before and the assumption is that perhaps the gate did not close after the last truck exited the facility for the night.

List any corrective actions:

All employees have been made aware of this issue and will better monitor the truck access gate before leaving at night.

Communicated to other employees, public, customers, etc.?

We had a brief emergency response drill to review this scenario.

Additional comments:

All COI inventory was counted, no discrepancies noted.
